From Feedback to Satisfaction

"A data-driven analysis of what truly drives airlines' passengers satisfaction."

www.aeronex.de

3M+ Passengers per day

80M+ Passengers per month

876M+ Passengers per year

The scale of U.S. air travel

At this scale, even small changes in passenger experience affect millions of journeys.

source: Federal Aviation Administration (FAA)

Data & Scope

Project Context

✓ **Analysis** of U.S. airline passenger satisfaction

✓ **Goal:** identify which aspects of the flight experience truly drive satisfaction

✓ **Focus** on turning passenger feedback into actionable business insights

Dataset Overview

Source: Airline Passenger Satisfaction Survey (Kaggle, U.S.-based)

100,000+ surveys responses
→ Each row represents one completed passenger survey

✓ Data cleaned, standardized, and prepared for analysis
100,000+
psurveys analyzed

+

23
Variables & Columns

Dataset Source

Dataset Structure

Passenger Characteristics

- Age
- Gender
- Customer Type
- Type of Travel

Flight & Travel Details

- Class
- Flight Distance
- Departure Delays
- Arrival Delays

Service Quality Ratings (0–5)

- Seat comfort
- Inflight entertainment & Wi-Fi
- Food & drink
- Gate location
- Online boarding & booking
- Onboard, check-in & inflight services
- leg room
- baggage handling
- Cleanliness

Target Variable

- Overall Satisfaction

Approach & Methodology

Data Collection	Data Cleaning & Preparation	Exploratory Data Analysis (EDA)	Statistical Testing & Hypotheses	Data Modeling (ERD & SQL)	Visualization & Storytelling
Passenger satisfaction survey dataset	Handling missing values, feature engineering (service scores, delay buckets)	Distribution analysis, correlations, segment comparisons, visual exploration	Hypothesis-driven analysis to validate key drivers of satisfaction and segment differences	Entity-Relationship Diagram design, relational schema creation, SQL table implementation	Interactive dashboards in Tableau to communicate insights and business implications

Tableau Dashboard

What Really Drives Passenger Satisfaction?

Understanding whether airlines should prioritize service improvements or operational performance
## What really matters to passengers in shaping overall satisfaction?

✓ Average scores don't explain satisfaction

✓ Satisfaction jumps only at excellence (4–5)

✓ Digital experience & onboard comfort matter most

Do flight delays matter more than service quality?

✓ Delays reduce satisfaction, but gradually

✓ Service quality matters more than delay reduction

✓ Great service outweighs delays

Satisfaction Rate by Service Score

Impact on Satisfaction: Service Quality vs Delays
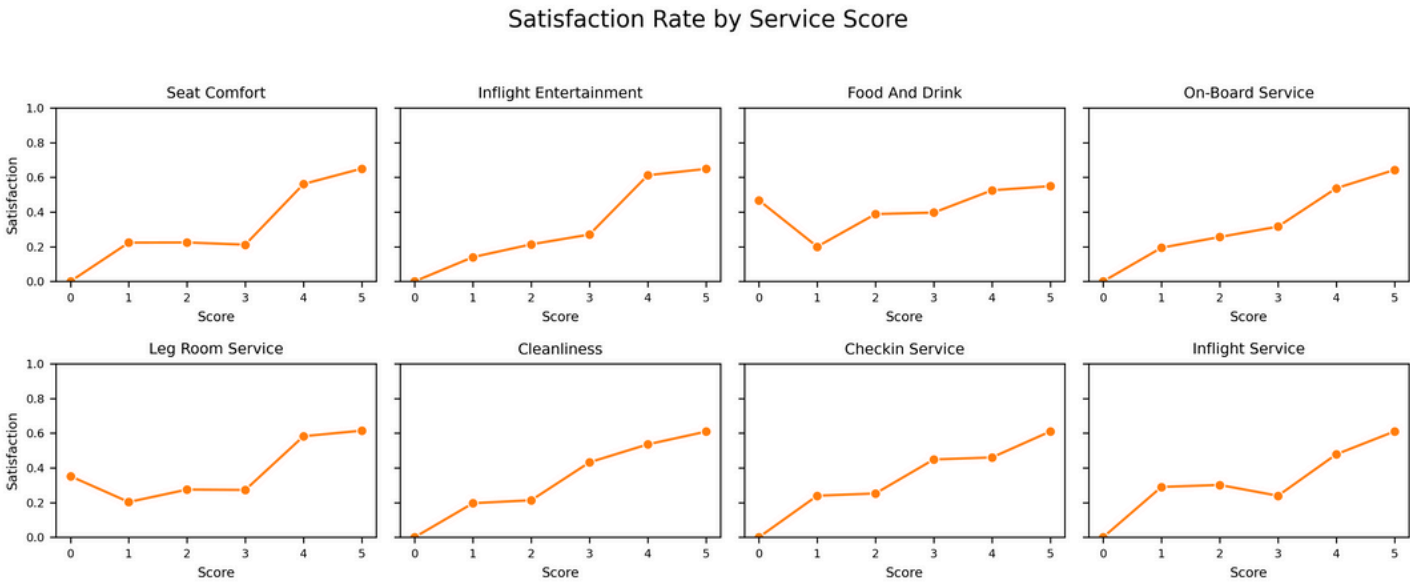

Target the Right Passengers, Invest in the Right Services

Matching passenger needs with high-impact service investments

Do different passenger groups value different aspects of the airline experience?

✓ Satisfaction varies strongly by passenger segment

✓ Different segments value service and tolerate disruptions differently

✓ One-size-fits-all service strategies fall short

Satisfaction Gap: Low (0–3) vs High (4–5) Service Quality

Are airlines investing in the right service improvements?

✓ High average ratings don't always drive satisfaction

✓ Satisfaction gains come from a few high-impact services

✓ Several tracked service metrics deliver low ROI when improved

Satisfaction Rate by Customer Type
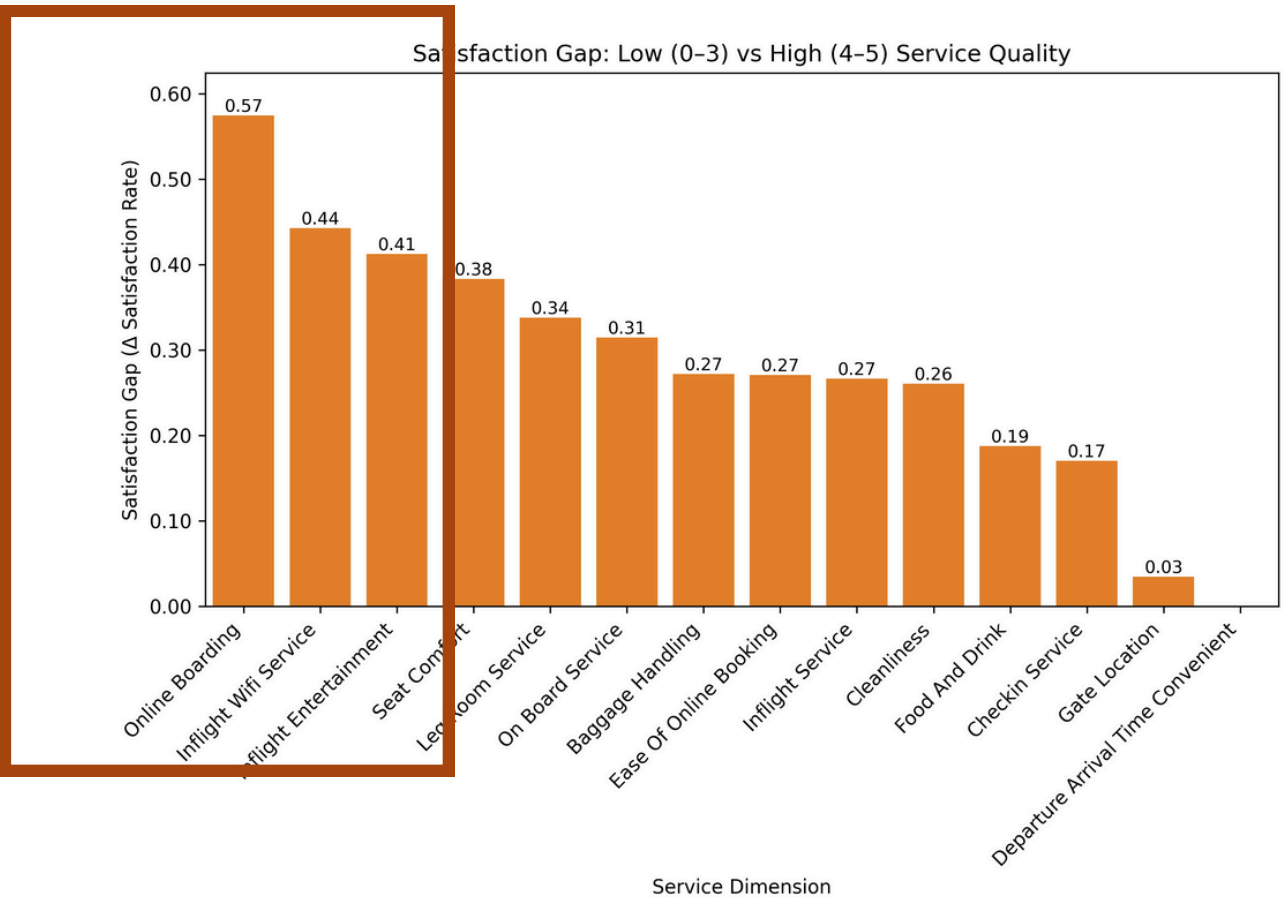

From Insight to Action

How airlines can predict dissatisfaction and prioritize the most effective improvements

## Can passenger dissatisfaction be predicted early?

✓ Satisfaction varies strongly by passenger segment

✓ Different segments value service and tolerate disruptions differently

✓ One-size-fits-all service strategies fall short

Which service improvements are most likely to increase passenger satisfaction under realistic constraints?

✓ High average ratings don't always drive satisfaction

✓ Satisfaction gains come from a few high-impact services

✓ Several tracked service metrics deliver low ROI when improved
Hypothesis Testing

Service quality differs between satisfied vs dissatisfied.

H_0: Mean Seat comfort is the same for satisfied and not satisfied passengers.

H_1: Mean Seat comfort is different (or higher for satisfied passengers).

t = 122.35
p < 0.001

Do Service Quality and Delays Significantly Affect Satisfaction?

H_0: Among delayed flights, satisfaction does not differ by service quality level.
H_1: Among delayed flights, passengers with higher service quality report higher satisfaction.

χ^2 = 4149.12
p < 0.001

Different passenger segments value different things.

H_0: Passenger satisfaction is independent of the type of travel.
H_1: Passenger satisfaction is associated with the type of travel.

χ^2 = 20945.23
p < 0.001

Business Implications

Key Implications

Prioritize High-Impact Services

Invest in digital experience and onboard maximum satisfaction gains.

Use Service Quality to Buffer Disruptions

Excellent service can mitigate the negative impact of delays.

Adopt Segment-Specific Strategies

Tailor services for business vs. leisure and loyal vs. non-loyal passengers.

Actionable Recommendations

Focus on top satisfaction drivers, not average ratings.

Maintain high service standards during delays to protect satisfaction.

Customize service design and communication by travel purpose and customer type.

Let's Create Exceptional Passenger Experience.

Thank You!
